# Adisseo launches partnership program to drive Amino Acid Balancing formulation in dairy nutrition

## Precision feeding to meet today's dairy challenges

Today, dairy farmers face critical challenges:

- **Produce more milk efficiently with fewer resources** (reduce protein fed and nitrogen excreted in the environment),
- **Maximize herd health and reproduction,**
- **Ensure profitability and sustainability of the dairy operation.**

**Amino Acid (AA) balancing formulation and precision feeding** are proven solutions to address these challenges. Yet not all dairy diets are AA-balanced, a missed opportunity for the dairy industry. For over 30 years, millions of dairy cows worldwide have benefited from AA-balanced diets, delivering consistent results in milk yield, milk component and lifetime performance, contributing to cows' health and high reproductive performance. This is a proven, low-risk technology backed by Adisseo's extensive research programs in collaboration with leading universities. A recent IFCN evaluation of 18 typical European farms across 9 countries estimated the implementation of AA balancing could increase annual income by €293 per cow per year.

To ensure the successful adoption of amino acid (AA) balancing, it is crucial to equip nutritionists with practical AA formulation know-how while demonstrating to farmers that this approach is an essential formulation practice. At the same time, the potential financial benefits of AA balancing must be clearly communicated to all actors of the dairy food chain - milk processors, dairy farmers and feed mills.

As the global leader in amino acid balancing for dairy nutrition, **Adisseo is launching a partnership program** to facilitate the use of AA-balanced formulation. This initiative aims to help feed mills and dairy farmers realize all the benefits of AA formulation by:

- Providing the feed mill with access to cost effective sources of protected liquid methionine and formulation guidance to manufacture best cost-effective compound feed,
- Providing dairy farmers ration solutions to maximize profitability and lower Nitrogen load on the environment.

The program will allow easier access to the dairy industry to get the benefits from AA balancing diet.

This partnership consists of a collaboration approach with feed mills through tailored support and communication strategies to strengthen farmer engagement and promote the proven advantages of Amino Acid-balanced nutrition.

You can access as an example, this educational resource on the principle and benefits of AA balancing here: <https://www.adisseo.smotly.com/eu/feed-mill>,

### **About Adisseo**

Adisseo is a global leader in animal feed, specializing in nutrition and health solutions that support sustainable livestock production. The group relies on its 5 research centers and its production sites based in Europe, USA, China and Thailand to design, produce and market nutritional solutions for sustainable animal feed. With more than 3,200 employees, it serves around 4,200 customers in over 110 different countries through its global distribution network.

With decades of expertise in amino acid balancing, Adisseo continues to advance dairy nutrition through groundbreaking research, strategic investments, and commitment to environmental stewardship.
